

ORGANIC PIQUE FABRIC

100% Organic Cotton
170gsm

Our Organic Pique fabric has a tight knit textured surface, a super soft hand feel, is PETA Vegan Approved, and much kinder to the environment than traditional cotton methods. Our 100% organic cotton is the perfect base for all your printing needs, and why not continue to be more sustainable right through to the printing methods you use by choosing more environmentally friendly options such as eco water-based screen printing or DTG inks to name a few.

AWDis TIPS	<p>Our Organic Pique is 100% Organic Cotton with a textured tightly knitted surface, achieving even and bold prints while using a minimal amount of ink, reducing your environmental impact.</p> <p>Make sure you use an anti-migration layer on those brighter colours to avoid colour migration to lighter colours and prints.</p> <p>Avoid prints cracking by curing at the correct temperature and time – always test print and cure.</p> <p><i>*Consider environmentally friendly screen printing inks.</i></p>	<p>Water-based inks are a great eco-friendly alternative. Ink seeps into natural fibre yarns leaving a soft print.</p> <p>Use a pre-base to achieve print prints on darker colours.</p> <p>Water-based inks can dry out quickly so ensure to work accurately and promptly.</p>	<p>Natural fibres are key to a vivid discharge print so our 100% organic cotton works really well.</p> <p>Whilst discharge can be achieved on our Organic Pique, the process uses a range of chemicals that can be released in to the environment – try using an eco-friendly print alternative.</p> <p><i>*Why not consider a more environmentally friendly print method?</i></p>	<p>Our Organic Pique fabric gives highly detailed DTG prints - let your imagination run wild! Using water-based inks will really help to keep your garments as eco-friendly as possible!</p> <p>Ensure pre-treatment ratios are correct to achieve bold and long-lasting prints.</p> <p>When printing on dark colours make sure your white pre-print layer is flash cured to avoid smudges.</p>	<p>By its nature, cotton absorbs moisture in the atmosphere. Pre-press the print area to remove moisture to avoid your print cracking after a wash or two.</p> <p>The soft textured surface of the Organic Pique ensures smooth transfer prints.</p> <p>Make your design pop by experimenting with full colour, glitter, flock, foil and rhinestones for a unique look. Look out for new and exciting eco versions.</p>	<p>Not Recommended</p>	<p>Our Organic Pique is not only suitable for, but also looks great with embroidery decoration.</p> <p>Ensure you use a stabilizer on the inside of the garment, behind your embroidery and make sure your needle is smooth and sharp to avoid snagging!</p> <p>Consider your artwork, as a large amount of embroidery could cause some puckering around the design.</p>
